

# 12MW wind turbine generator weight

## Overview

---

On average, a typical utility-scale wind turbine can weigh anywhere from 100 to 250 tons. This wide range reflects the diversity of turbine designs, from smaller models suitable for residential areas to larger offshore varieties that capture stronger wind currents. This manufacturer has been in business since 1990. The rated power of GE Vernova GE Haliade-X 12 MW is 12,00 MW. the cut-out wind speed. The Haliade-X provides a combination of high capacity factor and annual energy production to benefit from the high wind speeds found at offshore locations. Other older facilities use turbines from Zond, which was acquired by Enron (the inventor of "green tags"). CRRC Corporation Limited.
