

# 40 kilowatts of small wind power generation

## Overview

---

The size of a turbine and the speed of the wind determine how much electricity (power) a wind energy system will produce. A small wind energy system has a power output from 400 watts to 100 kilowatts (kW). A typical home uses approximately 10,649 kilowatt-hours (kWh), an average of. AIR 40 is the premier micro-wind turbine for land-based applications. It operates efficiently low to moderate wind speeds, providing energy for telecom, water pumping, lighting, SCADA, off-grid homes, or other low energy demand battery charging applications. Our experts can also design a complete solar and battery storage system to meet your energy goals.
