Overview

They are currently the most common. They are located on land no less than 3 kilometers from the coast and feed on terrestrial air currents. But as wind infrastructure has grown, so has confusion about how it works and what it means for communities, wildlife, and the grid. Some people still call modern turbines “windmills. ” Others believe turbines consume. The Gansu Wind Farm in China is the largest wind farm in the world, with a target capacity of 20,000 MW by 2020.
