

Australia peak shaving

Overview

Peak shaving is an energy concept that aims to reduce the peak loads in a power grid. As the price of power rises and rises, the imperative is to find a reliable and affordable solution. So, what does load shifting mean in electrical terms?

Load shifting simply refers to moving the time you use your electricity to a better time like when solar is more available. Peak shaving, also called load shedding, is a cost-saving technique used by businesses to reduce electricity expenses by minimizing peak electricity demand, thereby lowering demand charges.
