Overview

The PCS is the heart of two-way energy flow between the storage system and the power grid. Its primary functions include controlling the charging and discharging of the battery pack and managing AC/DC conversion. In a home energy storage or large-scale power station, the PCS performs AC/DC bidirectional conversion, enabling the battery to charge from the solar power system or. Delta's energy storage solutions include the All-in-One series, which integrates batteries, transformers, control systems, and switchgear into cabinet or container solutions for grid and C&I applications. These include the. , it's piled high with energy data.
