

Electric vehicle costs astana

Overview

Electric mid-size and full-size sedans (C and D segments) and SUVs will become as cheap to manufacture as gasoline-powered cars starting in 2026, while small EVs (B segment) will become cheaper in 2027 as falling battery costs and specialised production lines for EVs will. Electric mid-size and full-size sedans (C and D segments) and SUVs will become as cheap to manufacture as gasoline-powered cars starting in 2026, while small EVs (B segment) will become cheaper in 2027 as falling battery costs and specialised production lines for EVs will. This analytical report describes the role of electric vehicles (hereinafter - EV) in reducing greenhouse gas emissions (hereinafter - GHG emissions) and air pollution, as well as the current state of the EVs market in the world and in Kazakhstan. The report aims to inform the public about the. Central Asia is gradually emerging as a promising region for electric mobility, with countries like Kazakhstan and Uzbekistan leading the shift. This trend is also supported by the governments of various countries, which actively support the decarbonisation of transport systems in general and the introduction of electric vehicles. Kazakhstan is experiencing a noticeable uptick in the prevalence of electric vehicles in Kazakhstan, with the number of registered EVs reaching almost 19,000 units by mid-2025. This growth reflects both policy shifts and increasing consumer interest in clean transport.
