

Energy method for small mobile communication base stations

Overview

Various approaches have been proposed to reduce the energy consumption of an RBS, for instance, passive cooling techniques, energy-efficient backhaul solutions, and distributed base station design by using a remote radio head (RRH). Recognizing this, Mobile Network Operators are actively prioritizing EE for both network maintenance and environmental stewardship in future cellular networks. The paper aims to provide. Research conducted by mobile communication organizations such as Ericsson and the Next-Generation Mobile Networks (NGMNs) Alliance has demonstrated a growing trend in the number of mobile application users and subscribers. For this it is necessary to extend the study to the system/network level.

Energy method for small mobile communication base stations

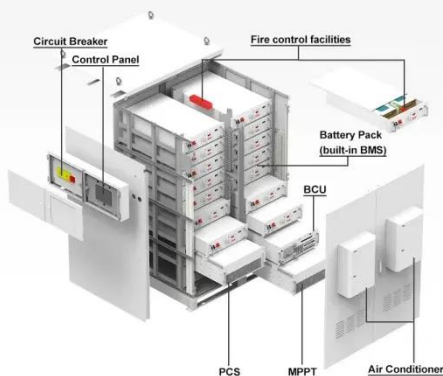

Energy-efficient indoor hybrid deployment strategy for 5G mobile small

Within this model, we leverage the flexibility of mobile small-cell base stations (MSBS) to seamlessly traverse service regions. We compute the transmission power and location of SBS and ...

Optimization Control Strategy for Base Stations Based on ...

Therefore, in response to the impact of communication load rate on the load of 5G base stations, this paper proposes a base station energy storage auxiliary power grid peak shaving method based on ...

Energy-Saving techniques in cellular wireless base stations

Various approaches have been proposed to reduce the energy consumption of an RBS, for instance, passive cooling techniques, energy-efficient backhaul solutions, and distributed base station design ...

Energy-efficiency schemes for base stations in 5G

In today's 5G era, the energy efficiency (EE) of cellular base stations is crucial for sustainable communication. Recognizing this, Mobile Network Operators are actively prioritizing EE for both ...

Analysis of energy efficiency of small cell base station in 4G/5G

Base Stations (BSs) sleeping strategy is an efficient way to obtain the energy efficiency of cellular networks. To meet the increasing demand of high-data-rate for wireless applications,

Energy-saving control strategy for ultra-dense network base stations

Aiming at the problem of mobile data traffic surge in 5G networks, this paper proposes an effective solution combining massive multiple-input multiple-output techniques with Ultra-Dense ...

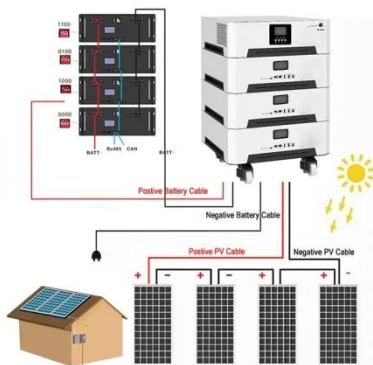

An energy-saving method applied in GSM base station

The present invention relates to an energy-saving method for a base station in a mobile communication system, in particular to a central base station with multiple processing units

Energy-Saving Techniques in the Next Generation of Mobile Communication

This literature review discusses the current state and future prospects of next-generation mobile networks (NGMNs) and describes energy-saving approaches for base stations (BSs).

Renewable microgeneration cooperation with base station sleeping ...

A joint load control based on energy sharing and dynamic on/off switching of a small base station is investigated in to reduce the grid power and efficiently utilize the renewable energy ...

Energy Consumption Optimization in Mobile Communication ...

energy-focused design of multi-antenna systems [8], [10]-[12]. We propose a method for minimizing the energy consumption of the wireless communication network, subject to cell load constraints that ...
