

# Energy transition honduras

## Overview

---

Honduras' energy transition is shaped by its significant renewable energy resources and the strategic need to reduce fossil fuel dependence, enhance energy security, and expand electricity access. The country's current energy mix is diversified, with over 50% of generation from renewables—primarily. Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country. Reports consist of 3 components: Overview of electrification in the country, including history, current status, geographic & demographic trends, and future plans. Since September 2015, Honduras made the conditional pledge — through its Nationally. New report finds translating enabling policies into coherent implementation mechanism will attract more investments in renewables, reducing dependency on fossil fuels.

## Energy transition honduras

### In Honduras, local communities miss out on benefits of large-scale

In Honduras, where fossil fuels account for about 38% of the electricity supply, and where the World Bank estimates that about 1.4 million people lack access to electricity, experts told ...

### Pathways to Decarbonize Honduras' Power Sector

Honduras, historically one of the most climate-vulnerable countries, committed to decarbonizing by 2050 but expects an increase in greenhouse gas emissions from current levels ...
