

Estonia Hydrogen Photovoltaic Site Energy

Overview

Eesti Energia's plan to produce green hydrogen at the Purtse wind and solar hybrid park and deploy it across various transportation modes—including buses, passenger cars, trucks, and locomotives—represents a bold vision for the future of mobility. Eero Pärtel, CEO of Eesti Energia, is a member of the European Commission's High Level Expert Group on Hydrogen. He is also a member of the European Hydrogen Backbone (EHB) steering committee. Eero is currently the CEO of Eesti Energia's Energy and Communications. The roadmap outlines the current state of the field along with themes within which the role of hydrogen in achieving climate objectives, strengthening the competitiveness of the economy, and reducing carbon emissions in different sectors of the Environment and Technology. The EU Innovation Fund has awarded €2.4 billion to 61 projects, including eight advancing hydrogen technologies across aviation, shipping, and heavy transport. Now he helms a team of 25 from nine nations — the CTO is Japanese, the CFO is French-based at an office in Tallinn. Estonia has announced the first three projects to receive funding under its largest-ever investment support measure, aimed at attracting large-scale industrial projects and strengthening energy security. The total value of the investments reaches almost €400 million, with the state contributing up to 50%. The Estonian roadmap is focused on the first of three hydrogen deployment periods - 2021-2030.

Estonia Unveils Largest-Ever Investment Support Scheme for Hydrogen

Estonia has announced the first three projects to receive funding under its largest-ever investment support measure, aimed at attracting large-scale industrial projects and strengthening energy security.

Estonian Hydrogen Roadmap

The roadmap was introduced and approved at the meeting of the steering group for the drafting of the Estonian Hydrogen Roadmap on 6 February 2023. The roadmap will be reviewed in co-operation with ...

Estonia - pv magazine International

Estonia added a record 513 MW of new solar capacity in 2024, bringing its total installed PV capacity to more than 1.3 GW, according to the Estonian Chamber of Renewable Energy (Eesti

Estonia , Green Hydrogen Organisation

By creating hydrogen-powered infrastructure, including refueling stations and transport solutions, Estonia envisions a future where green hydrogen contributes significantly to decarbonization, economic growth, and ...

Estonia's Green Hydrogen Push: Ambitious Goals, but Is Reality Close?

However, this optimistic outlook must be tempered by the reality that green hydrogen production is still in its infancy and faces significant hurdles, including high costs, infrastructure requirements, and ...

Estonia's hydrogen energy sector scales up to meet future need

Estonia is even weighing building a hydrogen-producing plant in Ida-Viru County in eastern Estonia, traditionally a region of energy production focused on oil shale extraction, but that may be repurposed to serve this new ...

Estonian Hydrogen Directory

Estiko Energia specializes in building advanced solar parks in Estonia, with 13 solar power plants totaling 2.3 MW in capacity. Six rooftop installations provide direct energy to buildings, while seven ground-based parks ...

Estonia , European Hydrogen Observatory

The Estonian roadmap is focused on the first of three hydrogen deployment periods - 2021-2030. The main topics in the roadmap are R& D, project implementation, increase of renewable energy and adoption of ...

2021-27 Strategic Plan

As part of the green transition planned under the EU 2021-27 funding, Estonia intends to develop a hydrogen roadmap to accelerate the introduction of renewable-based hydrogen as an energy carrier in the ...

Estonia Renewable Energy Generation and Storage

Wind and solar power stand at the center of Estonia's renewable

transformation. Onshore wind projects already contribute meaningfully to the grid, while offshore wind in the Baltic Sea is emerging as a ...
