## Overview

---

Equinix France makes use of Minkels Next Generation Cold Corridors® to house the high-density racks in an energy-efficient aisle containment environment. Data center racks are essential components in the infrastructure of modern digital operations. Too much humidity can lead to the erosion and damage of key. The international team at Minkels, including Minkels France and experts from the corporate office in the Netherlands, then designed extra-reinforced 50U and 52U racks that hold 4 blade servers with a capacity of up to 15 kW. “Our customers' IT challenges demand very flexible data centre solutions,”. A purpose-built humidity control system for critical facilities, the Constant Humidity Unit integrates wet-membrane (evaporative) humidification with refrigeration dehumidification in one intelligent package. It automatically switches modes and continuously regulates RH to a user-selected setpoint. Calculate and optimize your power usage effectiveness (PUE) Power usage effectiveness, or PUE, is a metric that data center infrastructure management (DCIM) engineers track to determine their data center's energy efficiency.
