

# How to power solar panel lights

## Overview

---

Position solar panels under bright LED or fluorescent lights, maintaining a 12-inch distance to simulate sunlight's intensity. Alternatively, use a standard household light bulb (60-100 watts) positioned 20 inches from the panel for 8-10 hours to achieve a meaningful charge. While there are some important details you need to pay attention to, it's a relatively short process. In this full guide, we'll show you step-by-step on how to connect a solar panel to both a battery. Power up your solar lights even during cloudy seasons using proven indoor charging alternatives. While sunlight remains the most efficient charging method, several effective options ensure your solar-powered fixtures stay bright when natural light is scarce. It's clean, renewable, and cost-effective. This project can be rewarding in two ways: it saves money and it helps the environment. Maintenance is minimal but essential.
