

# Investment prospects of wind and solar energy storage power stations

## Overview

---

While energy storage is already being deployed to support grids across major power markets, new McKinsey analysis suggests investors often underestimate the value of energy storage in their business cases. The revenue potential of energy storage is often undervalued. Investors could adjust their evaluation approach to get a true estimate—improving profitability and supporting sustainability goals. To this end, this paper constructs a decision-making model for the capacity investment of energy storage power stations. The challenge is how much the optimal capacity of energy storage system should be installed for a renewable generation. However, significant research and development efforts are needed to improve storage technologies, reduce costs, and increase efficiency. Will energy storage growth continue through 2025?

With developers. The European Bank for Reconstruction and Development and PJSC Ukrhydroenergo signed a €75 million loan for hydropower modernization in Ukraine. The Bureau of Reclamation released proposals for managing Colorado River reservoirs amid stalled negotiations among seven states over water sharing.
