

Is it normal for a 300W solar panel to charge at 3A

Overview

For example, if one solar panel is rated at 300 watts, a single panel would be sufficient for devices needing up to 3 amps at 12 volts, assuming ideal solar conditions. However, in practice, factors such as shading, panel orientation, and angle can significantly affect. On average, a 300 watt solar panel will produce about 240 watt-hours during peak sun hour (1kW/m² of solar radiation hitting the surface of the solar panel).
