According to the Energy Information. Last fall, Hurricane Helene left 5. During the recent Los Angeles fires, hundreds of thousands of people experienced outages, as damaging winds downed power lines and public. A microgrid is a group of interconnected loads and distributed energy resources within clearly defined electrical boundaries that acts as a single controllable entity with respect to the grid. Within minutes, trains stopped, flights were grounded, and critical services were knocked offline. Even though most power was restored within 24 hours, the blackout was a wake-up call, showing just how one problem in a.
