

Photovoltaic grid-connected string inverter

Overview

A grid tie string inverter is a type of solar inverter specifically designed to connect a solar panel system to the public electricity grid. While solar inverters are the most common type of inverter used for residential solar, they are just one of several inverter. PV string inverters convert the direct current (DC) generated by solar panel strings into alternating current (AC) that can be fed into the electrical grids, which are commonly used in homes and businesses, including rooftops, carports, ground mounts, and tracker systems. Sungrow string inverters. At the heart of most residential and commercial solar power systems lies the grid tie string inverter. All of these technologies are Inverter-based Resources (IBRs).
