

Photovoltaic panel medium voltage effect diagram

Overview

Explore SuperCoaching Now The diagram above is a cross-section of a photovoltaic cell taken from a solar panel which is also a type of photovoltaic cell. The cell consists of each a P-type and an N-type material and a PN junction diode sandwiched in between. It is this effect that makes solar panels useful, as it is how the cells within the panel convert sunlight to electrical energy. It refers to a junction between two semiconductors, that is, P-Type and N-type. A P-type. The Photovoltaic Effect

The heart of a PV cell is the interface between two different types of semiconductor (called p-type and n-type). When a light photon with sufficient energy hits an atom in this region, it throws out an electron.
