

Photovoltaic panel roof node

Overview

Consider the roof type (material and slope), weatherproofing, installation convenience, and wind and snow loadings. Install a mounting system for solar thermal or solar photovoltaic panels. Solar panels can't be put on a roof without first having mounting brackets installed. Choosing the right mounting system is as important as selecting the solar panels. Selecting the correct mounting system for your solar panels is a critical step in building an efficient and reliable solar energy system. Professional installation typically includes 5-25 year warranties and ensures compliance with 2025. Rooftop solar is one of the most accessible and cost-effective ways to harness clean energy—but success starts with choosing the right PV panel and an appropriate mounting system.
