APPLICATION SCENARIOS

Overview

Open map of the world's electricity, telecoms, oil, and gas infrastructure, using data from OpenStreetMap. Your browser may have performance or functionality issues with Open Infrastructure Map. WebGL with hardware acceleration is required for this site to perform well. Whether it's enabling mobile connectivity, supporting emergency response systems, or providing data transmission in remote areas, these installations must operate. Many of CHELCO's power poles support more than just our electric lines. Power factor corrected (PFC) AC/DC power supplies with load sharing and redundancy (N+1) at the front-end feed dense, high efficiency DC/DC modules and point-of-load converters on the back-end. What's quietly humming in the background making this all possible?

Telecommunication base stations, working silently like the circulatory system of our connected world.
