

Quality of bidirectional charging products for mobile energy storage containers used in the catering industry

Overview

In this study, an evaluation framework for retrofitting traditional electric vehicle charging stations (EVCSs) into photovoltaic-energy storage-integrated charging stations (PV-ES-ICSs) to improve green and low-carbon energy supply systems is proposed. Sabine Busse, CEO of Hager Group, emphasized the crucial importance of bidirectional charging and stationary energy storage systems for the energy supply of the future at an event of the Chamber of Industry and Commerce in Saarbrücken. A bidirectional EV can receive energy (charge) from electric vehicle supply equipment (EVSE) and provide energy to an external. Lithium-ion batteries have emerged as the current dominant technology, offering improved energy densities, cycle life, and reliability. Meanwhile, lower-cost alternatives to lithium, such as sodium-sulphur, are also being developed. This capability will not only enable emergency backup power for homes and businesses but also allow users to alleviate grid. As shown in Fig. By enabling electric vehicles to serve as mobile energy storage units, V2X offers grid stabilization and new business.
