

# Solar panels connected to street lights

## Overview

---

Modern integrated solar street lights typically use monocrystalline or polycrystalline panels, with monocrystalline being the more efficient option—especially important when you're working with limited surface area on a compact light fixture. The "integrated" part means everything—panels, batteries, LEDs, and controllers—lives in one compact housing instead of. Installing an All-In-One (AIO) solar street light is significantly faster and easier than traditional split-type systems. These systems harness the sun's power to illuminate streets, highways.
