

Solar photovoltaic energy storage system heating

Overview

“Further, the system is integrated with a seasonal storage that is an aquifer thermal energy storage (ATES) system, a heat exchanger, and a heat pump (HP) to provide heating, including space heating (SH), domestic hot water (DHW), as well as cooling. Image: Delft University of Technology. The AES Lawai Solar Project in Kauai, Hawaii has a 100 megawatt-hour battery energy storage system paired with a solar photovoltaic system. Sometimes two is better than one. Coupling solar energy and storage technologies is one such case. Solar energy storage for heating captures sunlight as thermal energy, storing it in insulated tanks or specialized materials for later use.
