

Solar photovoltaic panels rented on farmers roofs

Overview

Yes, you absolutely can install solar panels on most barn roofs, and in many cases, barns make better candidates for solar installations than residential homes. The key is proper assessment and planning. Agrivoltaics is defined as agriculture, such as crop production, livestock grazing, and pollinator habitat, located underneath solar panels and/or between rows of solar panels. Solar energy offers farmers the opportunity to harvest the sun twice—the same reason land is good for farming (flat, open). Structural Assessment is Critical: While most barns can support solar panels, proper structural evaluation is essential since solar panels add 2-4 pounds per square foot and have 25-30 year lifespans. Lower commodity prices, higher. Solar panels can reduce your electric bill and reliance on nonrenewable energy. Farming comes with enough uncertainty. According to the International Renewable Energy Agency (IRENA), the current levelized cost of energy (LCOE) for large-scale solar is around \$0.1% between 2018 and 2019 (IRENA, 2020).
