

Tallinn battery safety

Overview

Always carry power banks in your hand luggage and keep them with you—never in overhead compartments or checked bags! Why?

Lithium-ion batteries can undergo “thermal runaway” (rapid overheating), and recognising it early is crucial so you can respond. These batteries become particularly dangerous when used or stored improperly. They contain flammable substances. Tallinn Airport has released a video showing a traveler's suitcase engulfed in flames after a battery packed inside it exploded. In 2025 alone, the FAA has recorded over 40. That's where the Tallinn Energy Storage Battery Protection Board swoops in like a superhero with a circuit board cape. This unassuming piece of technology is revolutionizing how we store and protect energy in everything from solar farms to electric vehicles. In the event of a major blackout or grid.
