

The concept of space solar power generation

Overview

Space-based solar power (SBSP or SSP) is the concept of collecting solar power in outer space with solar power satellites (SPS) and distributing it to Earth. Its advantages include a higher collection of energy due to the lack of reflection and absorption by the atmosphere, the possibility of very. MAPLE consists of solar radiation receivers (left) and an array of flexible lightweight microwave power transmitters (right) driven by custom electronic chips. of this energy is reflected back into space by the atmosphere. Our concept is based on the modular assembly of ultralight.
