

What is a distributed base station power supply

Overview

A PDU is a specialized electrical component designed to take a high-capacity power feed and distribute it to multiple lower-capacity outlets. ed in close proximity to the antenna tower. This BTS connects to both the Mobile Switching Center (MSC), which directs hand-off between towers for mobile users, and the Radio Frequency (RF) transmitters/receivers antenna located on the tower structure. The “hut” at the base of the tower or in the. Whether in a massive data center or a remote telecommunications hub, PDUs ensure that electricity from a primary source is divided, managed, and delivered efficiently to servers, switches, and networking hardware. the existing wireless distributed base. Our company has developed an integrated design of distributed base station power supply system for a variety of installation environments such as corridor, shaft, and outdoor environment.
