

# Where does the electricity collected by photovoltaic panels go

## Overview

---

This PV charge creates an electric current (specifically, direct current or DC), which is captured by the wiring in solar panels. A photovoltaic (PV) cell, commonly called a solar cell, is a nonmechanical device that converts sunlight directly into electricity. Sunlight is composed of photons, or particles of solar energy. These photons contain varying amounts of. Solar technologies convert sunlight into electrical energy either through photovoltaic (PV) panels or through mirrors that concentrate solar radiation. Solar energy, the radiant light and.
