

Where does the electricity generated by the photovoltaic panels on the roof go

Overview

Electricity generated by solar power stations is primarily directed towards residential, commercial, and industrial uses. It is usually fed into the grid, 2. some is used on-site for immediate. Solar power converts energy from the sun into electricity, which can be generated through photovoltaics (PV) or other methods. The process involves several steps, starting with the collection of sunlight using solar panels. stored energy can be utilized.
