

Which situations require a PV combiner box

Overview

Installation of combiner boxes becomes necessary when your solar array includes more than three strings requiring inverter connection. With components such as dc fuse, dc spd, switch disconnect, and distribution box, you boost. A combiner box is a key DC distribution device used between PV strings and the inverter. It puts these wires together into one main wire. Inside the box, there are safety parts like fuses, circuit breakers, and surge protective devices.
